

AAROGYA KALASH

Membership & MHRS Services — English Translation

Translation note: This document is an English translation and professional formatting of the supplied Hindi/English source text. Medical, scientific, treatment, patent, and government-registration statements are presented as claims contained in the source material and have not been independently verified.

1. Membership — National & International

Membership Duration	Amount
1 Year	₹3,50,000
5 Years	₹9,50,000
10 Years	₹25,50,000

Membership coverage: Beauty, health and facility/services, with GST included. The source text states that bills are provided and national/international currencies, including dollars, are accepted.

Note: The source specifically mentions chronic sugar/diabetes and diseases as a note for consideration.

2. Aarogya Kalash Mission — Source Description

The source describes Aarogya Kalash as a mission operating under a concept involving a hospital of up to 100 beds and a central/capital hospital of up to 500 beds. It describes an objective of providing opportunities for human beings to achieve a disease-free state without medicines, through a new concept. The source refers to MHRS and patented health services being provided worldwide.

3. Annual Health Services under Aarogya Kalash

- Monthly health guidance.
- Quarterly health discussion meetings.
- Half-yearly workshop focused on immune-system development.
- Annual health diagnosis and MHRS graph, with proposed solutions.
- Annual medical-report discussion and feedback, including a diet chart and MHRS meditation.

4. MHRS Processes and Fees

General description in the source: MHRS is described as a form of medical/health assessment and intervention using an MHRS graph and what the source calls “patent medicine.” The following descriptions are translated from the supplied material without independently confirming the stated medical mechanisms or outcomes.

Step 1 — ₹2,500

Advanced research based on ancient Indian disciplines and a natural research approach. The source describes an MHRS testing method that prepares a graph intended to identify potential future diseases and emphasize prevention and solutions. It refers to an electro-point detector and assessment of blood-circulation processes and lifestyle. The source states that initial information about internal and external bodily responses can be obtained within one minute, and that a 10-minute graph may provide information concerning the period from birth to the present and possible future diseases. It further

claims that MHRS research is registered with the Government of India and that a patent has been registered. The stated session duration is approximately 1 hour.

Step 2 — ₹7,500

The source describes this as natural research based on ancient Indian disciplines and states that it has been providing medicine-free health services for 22 years. It claims that thousands or lakhs of ordinary citizens and long-term patients have benefited. The text compares the service to “wiring, repairing and servicing” in the medical field and describes MHRS health assessment and solutions as being provided by its originator, Janak Gyani Das Manikpuri. It states that the approach is intended to improve the body's resistance to different diseases, support circulation and purification processes, and promote energy, longevity and vitality. Stated duration: approximately 1.5 hours.

Step 3 — ₹15,000

The source states that the process is provided according to the MHRS graph and is intended as an initiative for permanent solutions to incurable diseases. It describes assessment of nervous-system conditions, old injuries, swelling, lack of bone-marrow formation, irregular or curved posture, slipped disc, constipation, mental-health conditions, malnutrition in children, respiratory benefits and certain women's health conditions including infertility. It also claims benefits for immunity and resistance against various diseases and global pandemics, and describes the process as supporting an energetic body and physical balance according to atmospheric temperature and weather. Stated duration: approximately 2.5 hours.

Step 4 — ₹25,000

The source states that this process is provided specifically to patients after health testing and according to the MHRS graph. It describes an intended approach for incurable and hereditary diseases and refers to assessment of the central nervous system, peripheral nervous system and autonomic nervous system. It also describes balancing three nadis—Ida, Pingala and Sushumna—and other nadis. The source claims that this may be useful in emergency situations involving paralysis and heart attack, and presents the approach as a modern research-oriented form of traditional Indian and spiritual medical knowledge. Stated duration: approximately 2 to 2.5 hours, with the possibility of extension.

Step 5 — ₹35,000

The source describes this as a process selected on the basis of the MHRS graph and a specified time period. It refers to the spine, spinal nerves and spinal cord, and claims that cerebrospinal fluid (CSF) formation can help in the prevention and solution of bone-related problems. It describes a natural process intended to restore a bent body posture toward a previous position and bring energy and vitality according to age. It further refers to future practice of yoga, meditation, spiritual discipline and celibacy as part of a new life aligned with nature. Stated duration: approximately 3 hours.

Step 6 — ₹45,000

The source describes this as health testing through an MHRS graph and states that it is intended to have special significance in the field of health solutions. It refers to blood circulation, digestive secretions, bone-marrow formation, mental balance, atmospheric energy, temperature and climate adaptation. It claims an application to incurable and hereditary conditions and describes the intended goal as supporting longevity and a path toward spiritual liberation. Stated duration: approximately 2–3 hours.

Step 7 — ₹55,000

The source describes MHRS and “patented medicine” as being used through an MHRS graph in situations where a patient may be unable to describe symptoms, including unconsciousness, coma, brain hemorrhage, paralysis, or being confined to a bed or wheelchair. It claims that the research approach can naturally code therapeutic effects into bodily functioning and influence the nervous

system, brain sensations, information processing, motor control and life energy. It refers to balancing Ida, Pingala, Sushumna, Chitrani and other nadis, and claims effects involving neurons, sensory and motor nerves, circulation, pulse rate, blood pressure and consciousness. The source attributes the research to MHRS originator Janak Gyani Das Manikpuri and states that the knowledge is registered with the Government of India and based on scientific reasoning. It presents the concept as having been developed over 22 years.

5. Summary of the Concept Presented in the Source

The supplied material presents Aarogya Kalash and MHRS as a health-service concept combining health assessment, lifestyle guidance, workshops, meditation, diet guidance and a series of paid processes. It describes MHRS as drawing on ancient Indian disciplines, natural research and a combination of traditional and modern concepts. The source makes a number of claims concerning disease prevention, disease resolution, nervous-system balance, immunity, circulation, consciousness, longevity and emergency medical situations. These claims are reproduced here as source claims rather than as independently established medical conclusions.

6. Important Source-Text Note

The original text contains several medical and scientific assertions, including claims about treating or resolving serious and hereditary diseases, coma, brain hemorrhage, paralysis, heart attack, infertility and other conditions. It also refers to Government of India registration and patent registration. Because this document is a translation, these statements have been retained for fidelity to the supplied source. Before using this material for public advertising, medical promotion, membership sales or clinical communication, the relevant claims, registrations, patents, qualifications, pricing, GST treatment and regulatory compliance should be independently verified and reviewed by an appropriately qualified professional.
